

Container Systems

Mobile, Contained, Efficient Processing

Concealed Processing Systems

Allied Industrial Dynamics Container Systems offer easy transportation, setup and tear down of operations while also creating a low profile, helping create a discrete and clean looking worksite. These systems can be custom tailored to fit a variety of different industries with an unlimited list of different applications. All Container Systems are controlled by Allied Automated Control Systems and are fit with Allied Centrifuge Technologies decanters and separators. Customize containers to fit your specific processing requirements whether that's preparation, separation or flow of product these systems can accommodate your specific requirements.

Benefits

- 🌀 **Discrete Low Profile Worksite**
- 🌀 **Mobile & Module**
- 🌀 **No Infrastructure Required**
- 🌀 **Custom fit to your application**
- 🌀 **Allied Automated Control Systems**

Processing Mobility

Whether your operation is moving from location to location, or needs to be manipulated and moved on site, Container Systems are easy to set up and tear down and can be safely moved or relocated.

Infrastructure Solution

Not all worksites have available infrastructure to house complex separation processing systems. Container systems are a cost effective solution when implementing a processing system without any available infrastructure. Container Systems allow growing operations the ability to expand easily and accommodate the demand of business group. Climate controls are available to keep equipment and work areas at optimal temperatures.

Easy Handling of Material

All container systems offer easy setup and tear down. With modular discharge augers and feed zones. Easy connections for input feeds and pumps. Multiple options available to house polymer mixing tanks and slurry preparation tanks. Making the process of input to end products and streams efficient and effective.

Custom Fit Per Application

Container Systems are custom designed per application requirement. Fit with any Allied Industrial Dynamics equipment from decanters to separators and more, no matter what industry you are operating in your processing will be custom fit with equipment that will achieve maximum results.

Automation & Controls

All Container Systems are powered and controlled with Allied Industrial Dynamics Automated Control Systems. These user friendly panels are easy to navigate and give you full control over your processing. All control systems are customized to the specific container system and the processing application that is involved.

Industries & Applications

Allied Industrial Dynamics provides solutions for all industries with applications requiring processing of Industrial Slurries. Our processing experts will diagnose your application and fit the right equipment for your requirements.

- Oil & Gas
- Mining
- Food Processing
- Cannabis & CBD
- Pharmaceuticals
- Tunneling
- Sump & Tank Cleaning
- Animal By-product Rendering
- Pulp & Paper
- Site Remediation
- Bio Fuel
- Chemical Processing
- Animal Waste & Manure
- Tailings Recovery
- De-watering
- Solids Control
- Vegetable oil production
- Much More.....
